Assignment-4

(Date & Time function)

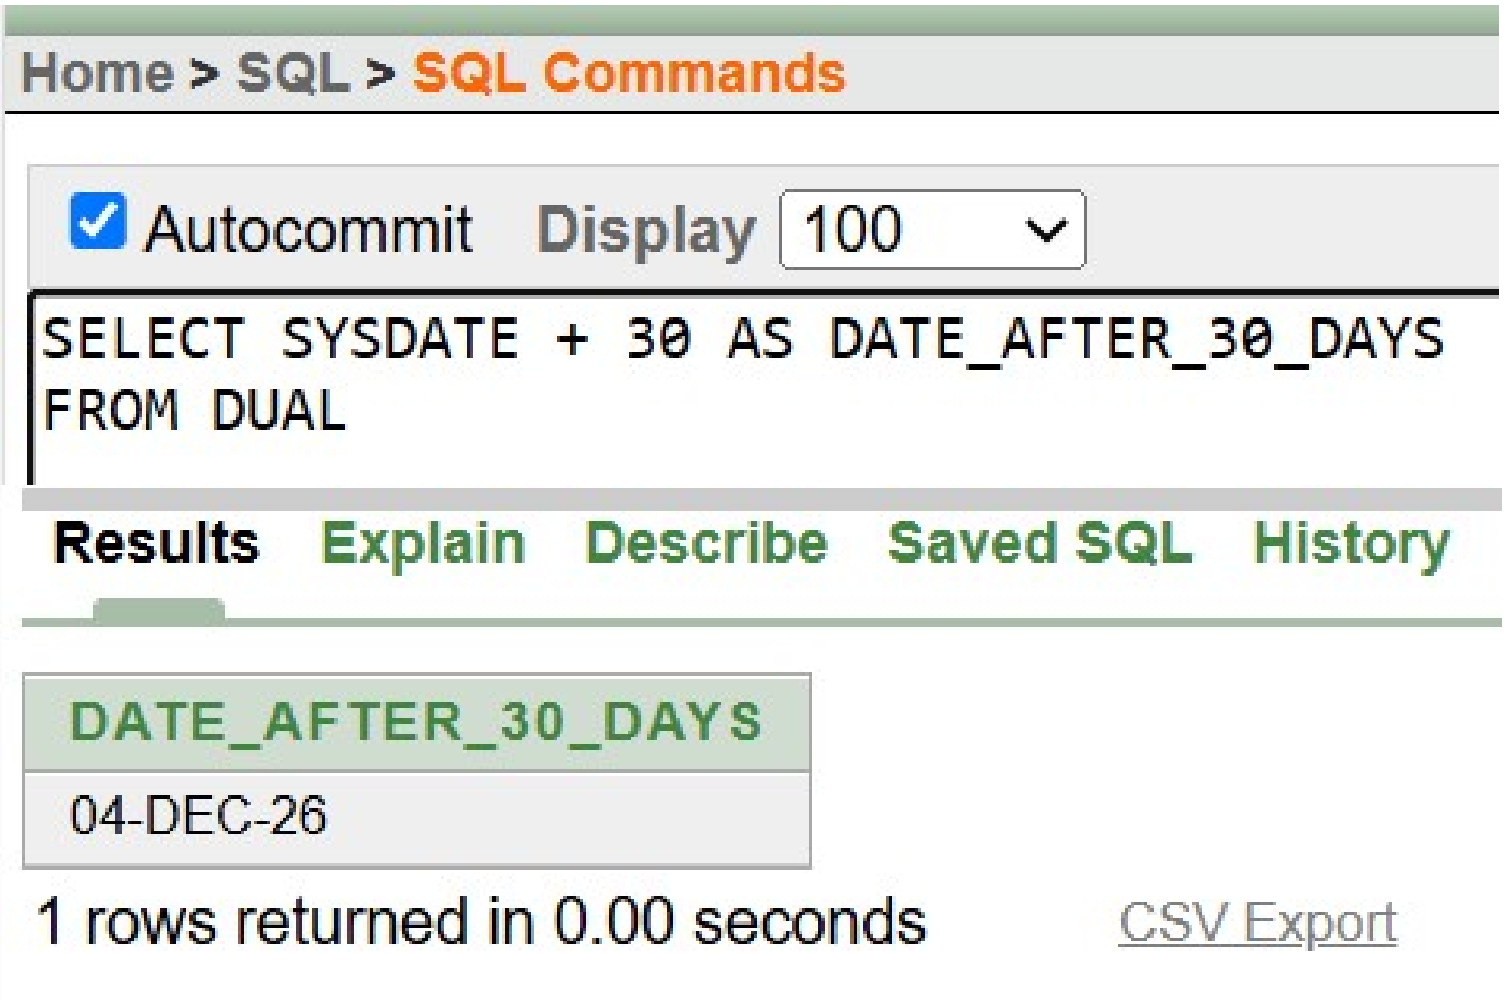

Q1. Write an SQL query to display the current system date.

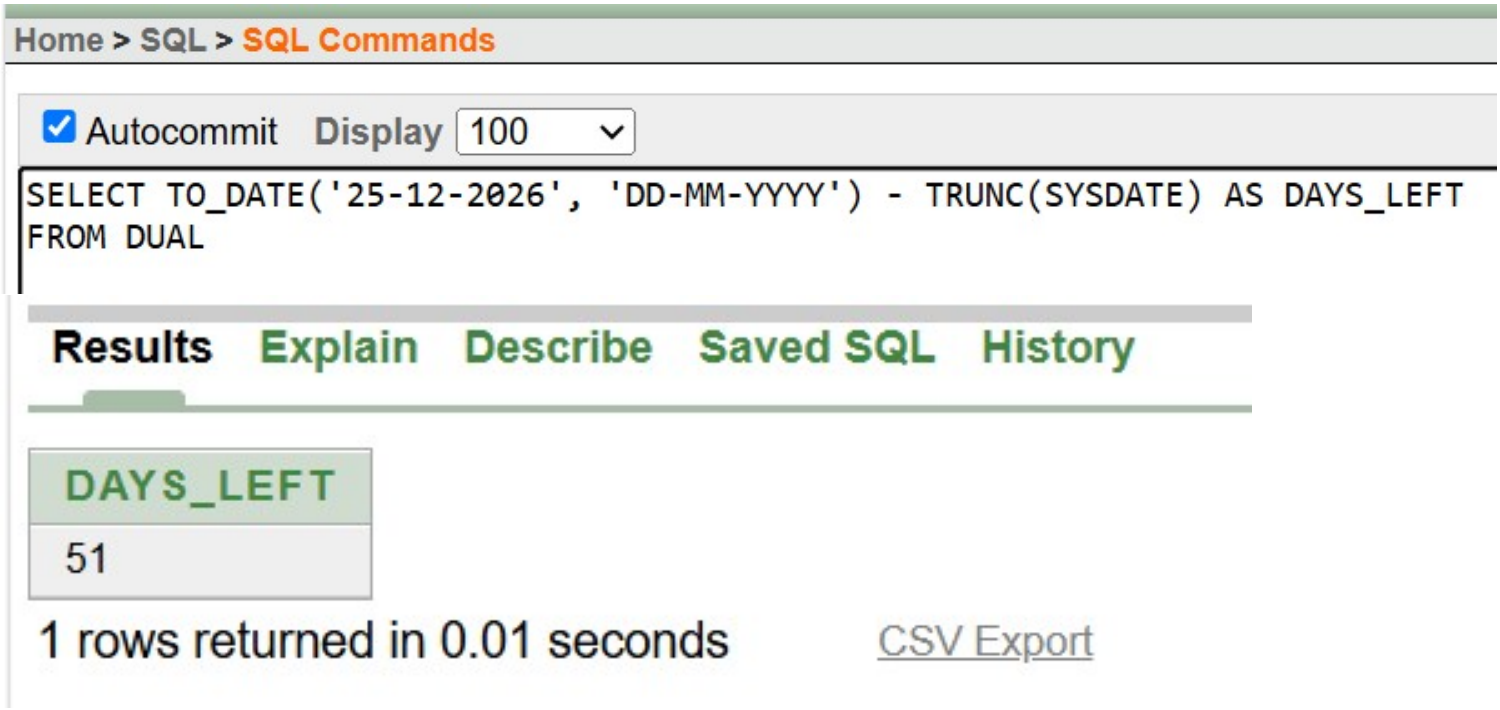

Q2. Extract the year from the current date.

Q3. Display the date after 30 days from today.

Q4. Calculate how many days are left between today and a specific date '25-DEC-2026'.

TRUNC() FUNCTION IN ORACLE SQL

Definition:
TRUNC() is a function used to remove the time portion (hours, minutes, seconds) from a date.

Syntax:
TRUNC(date);

Example:
SELECT TRUNC(SYSDATE) FROM DUAL;

Use of TRUNC() in Q4:

```
SELECT TO_DATE('25-12-2026', 'DD-MM-YYYY')
     - TRUNC(SYSDATE) AS DAYS_LEFT
FROM DUAL;
```

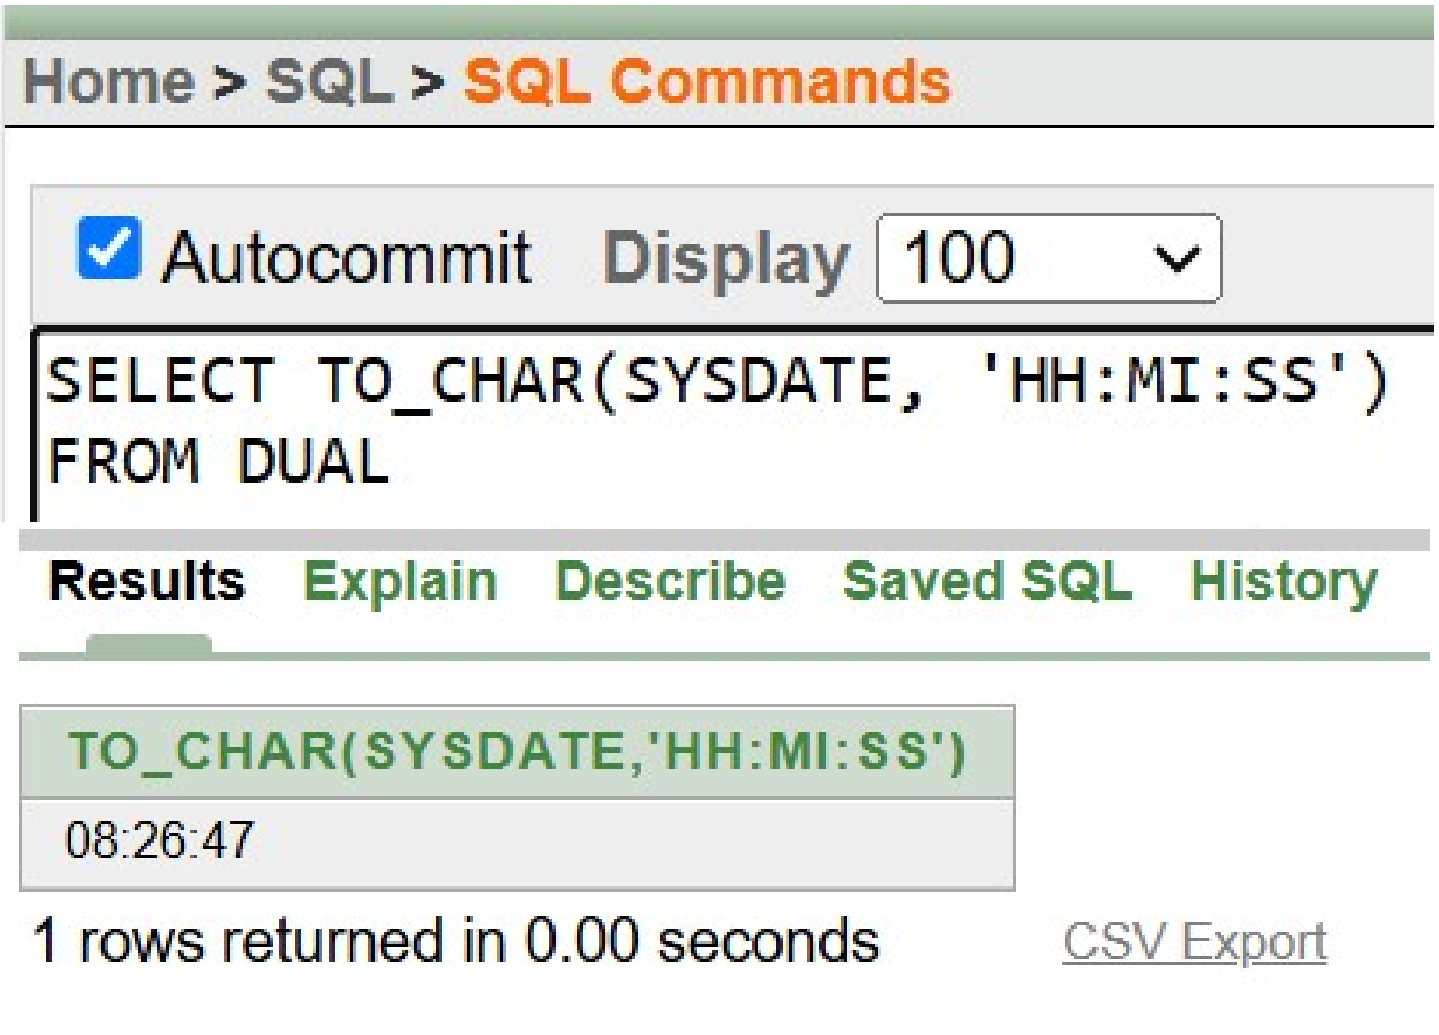

Explanation:
1. **SYSDATE returns the current date and time.**
2. **TRUNC(SYSDATE) removes the time portion.**
3. **TO_DATE() converts a string into a date.**
4. **Subtracting two dates returns the difference in days.**

Why use TRUNC()?
Without TRUNC(), the result may contain decimal values because SYSDATE includes the current time.

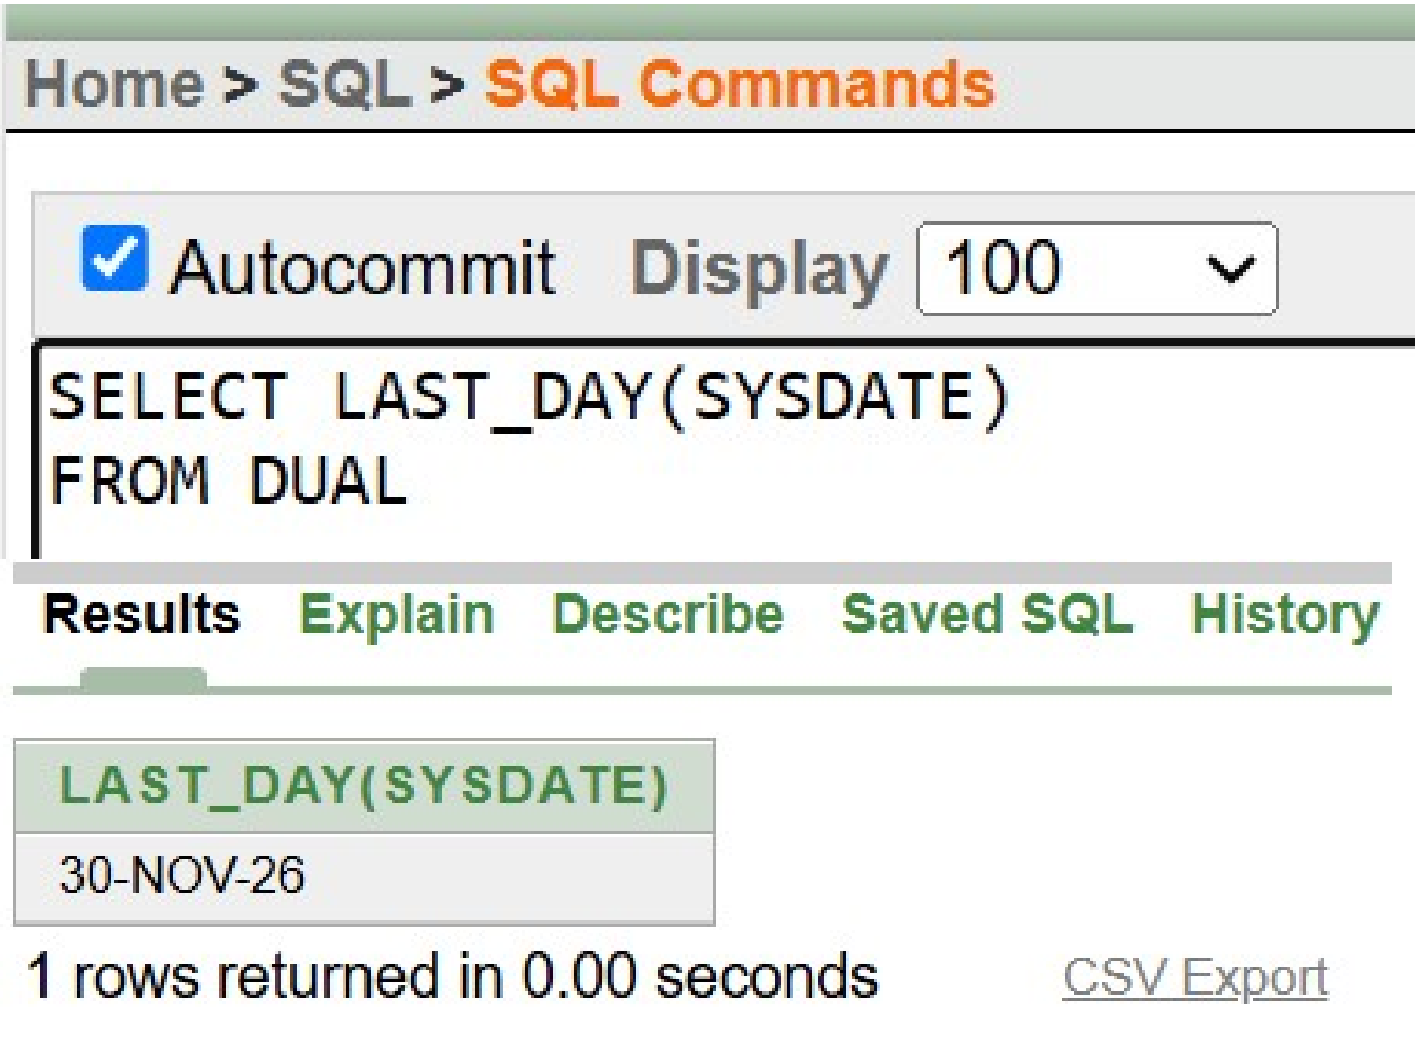

TRUNC(SYSDATE) ensures that the calculation considers only the dates and gives a whole number of days.

Note:
TRUNC(SYSDATE) = Current date without time.

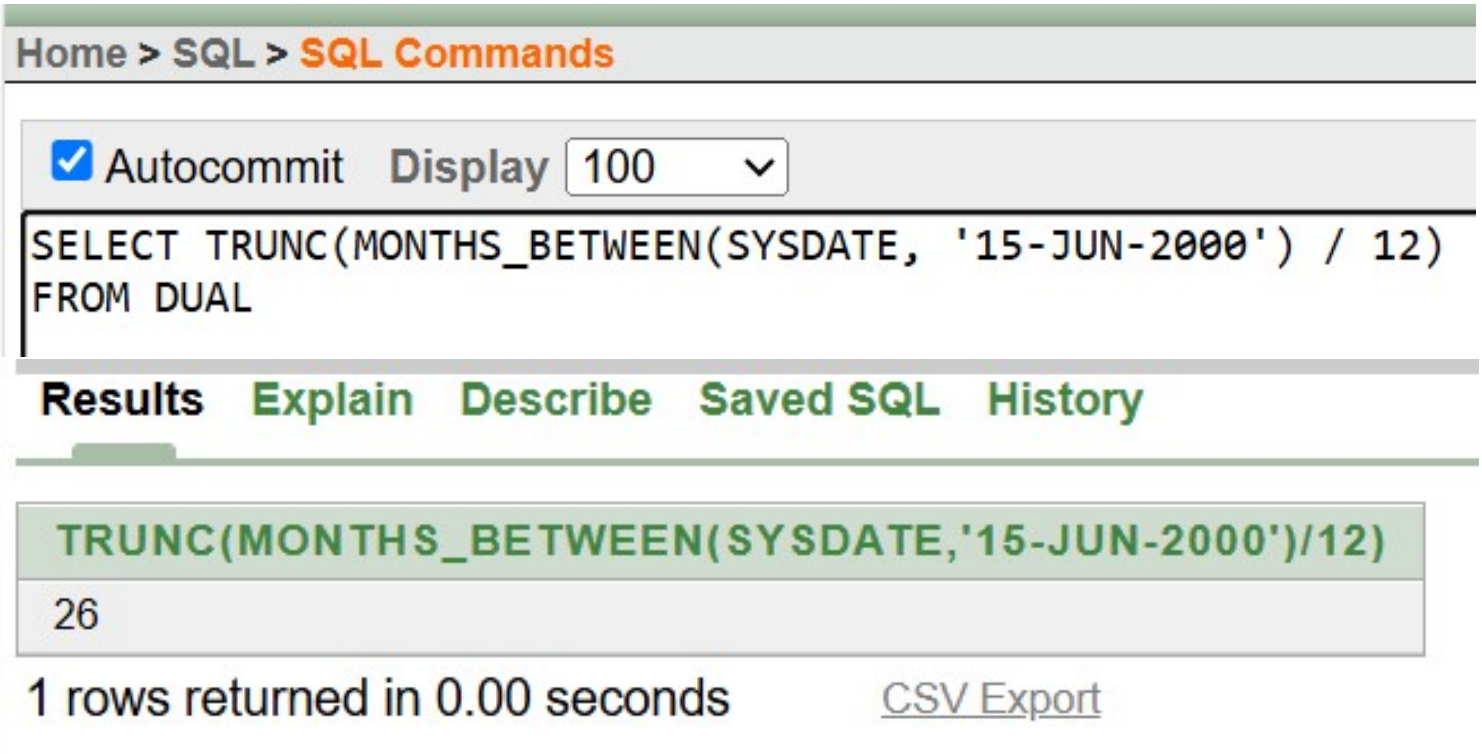

Q5. Display the current system time (hours, minutes, seconds).

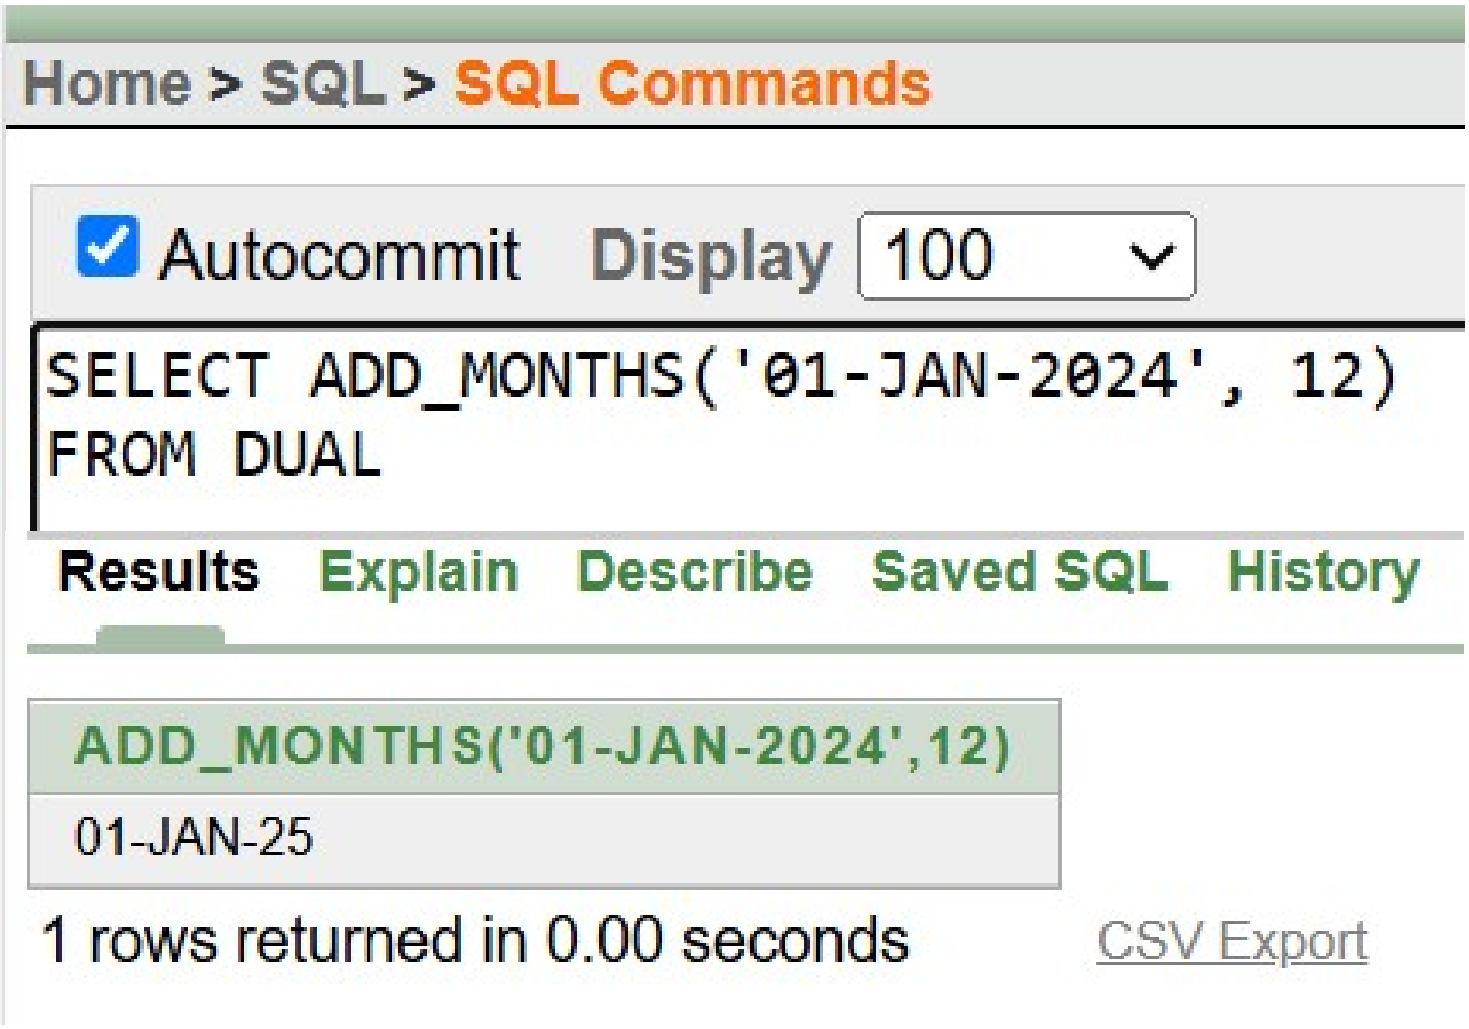

Q6. Find the last date of the current month.

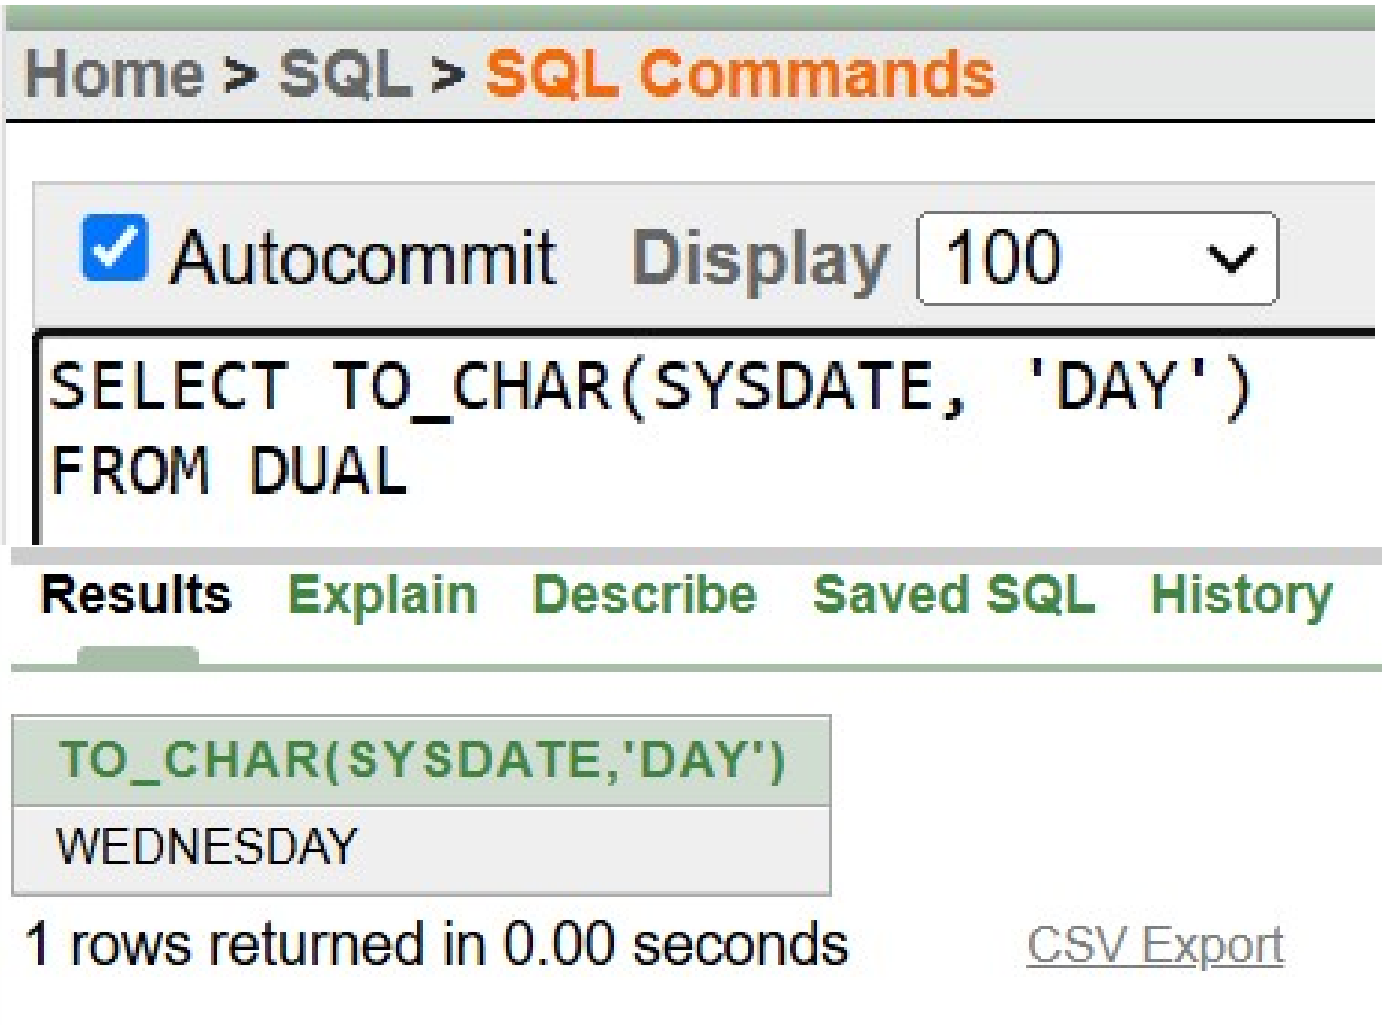

Q7. Calculate the age of a person born on '15-JUN-2000'.

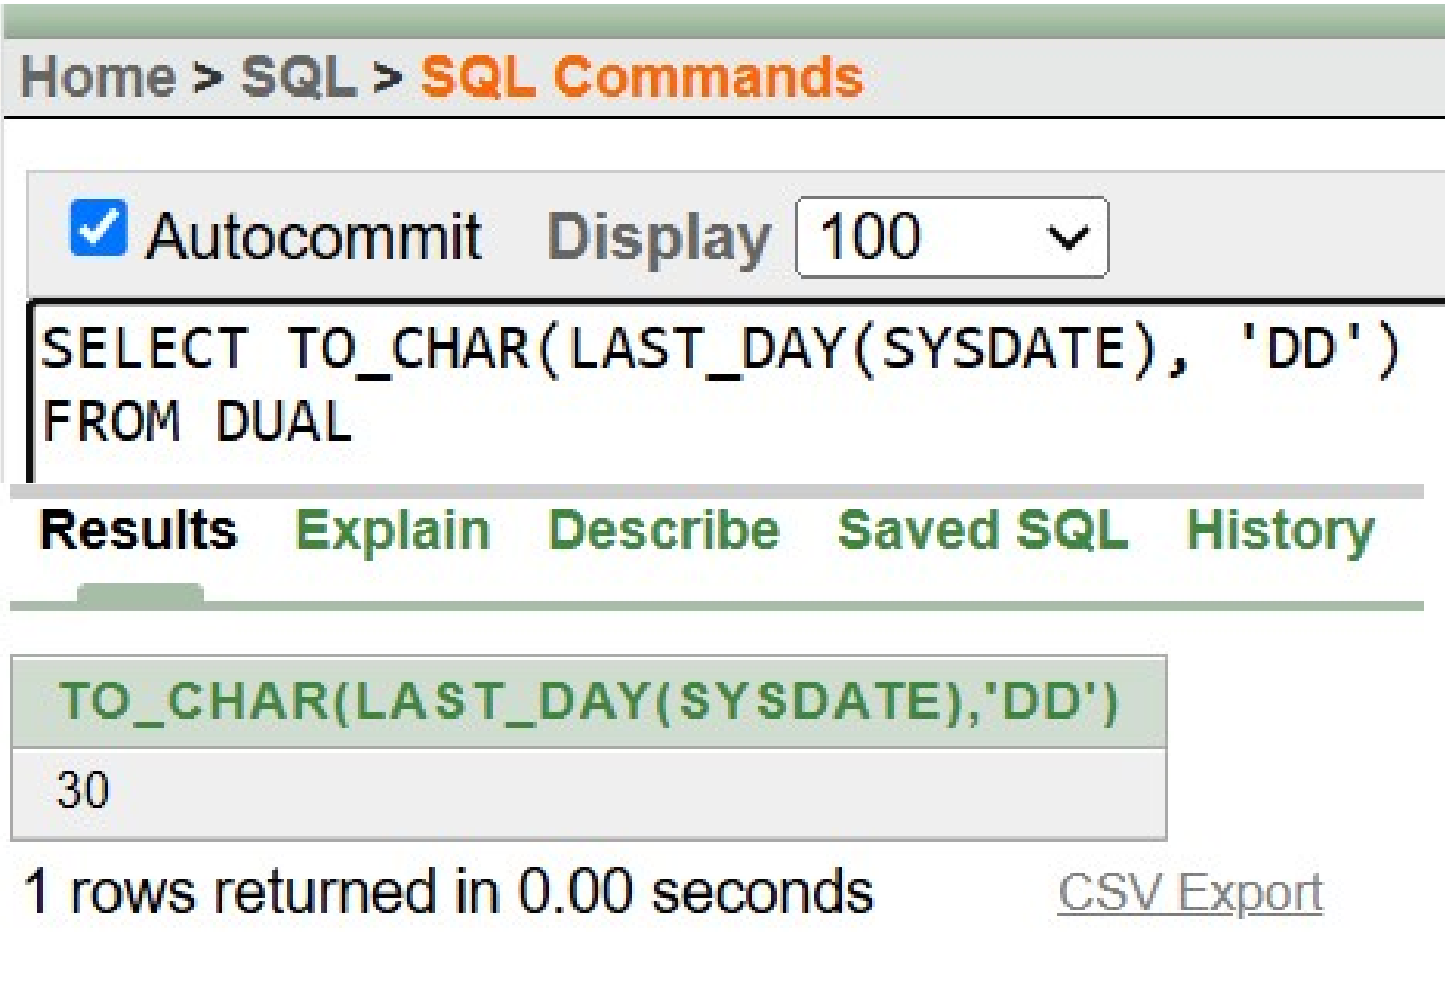

Q8. Add 1 year to a given date '01-JAN-2024'.

Q9. Display the day (Monday, Tuesday...) for the current date.

Q10. Find the number of days in the current month.
