Assignment-5

1. The commission that an employee can avail is calculated by multiplying the commission percentage to the salary. The report requirement is to fetch the full name and the commission amount of all the employees whose first_name contain the substring 'avi'. If the commission amount is null, then that record needs to be omitted. Please name the calculated commission column header as "commission amt".

2. The programmer wants to get employee details in a particular format. The report should only contain information about those employees who are eligible for commission. Also the details should be shown in a single column whose name should be 'Organization Employee Details'. The data should be displayed in an ascending order of hire date.

Sample row:
'The employee Karen Partners was hired on 5th-JANUARY-1997 at a salary of 13500'

Home > SQL > SQL Commands

Autocommit Display 100

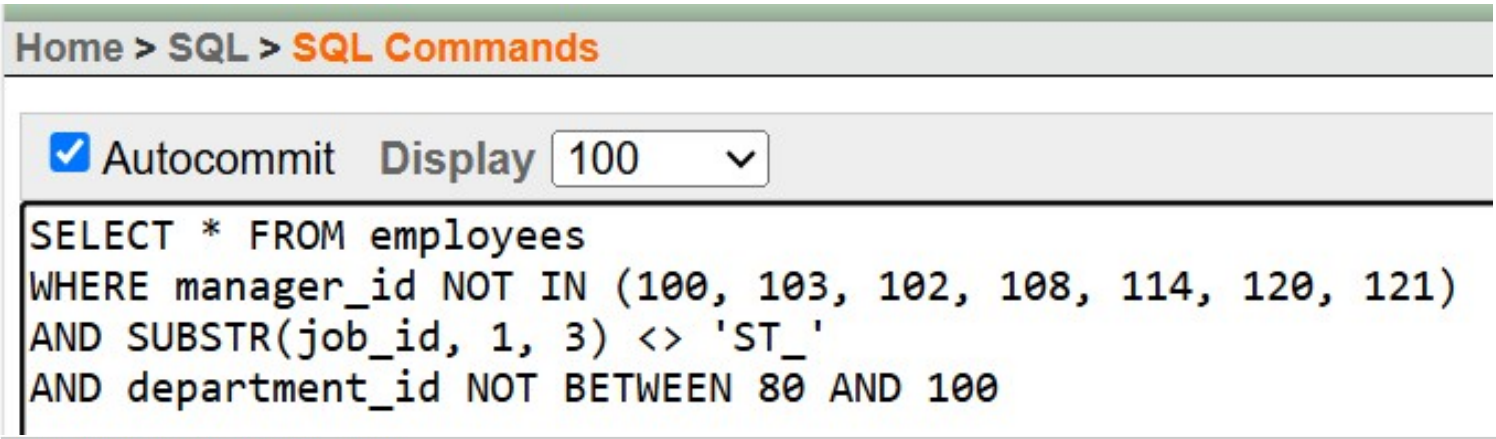

```
SELECT
    'The employee ' || first_name || ' ' || last_name ||
    ' was hired on ' ||
    TO_CHAR(hire_date, 'FMDDth-MONTH-YYYY') ||
    ' at a salary of ' || salary
    AS "Organization Employee Details"
FROM employees
WHERE commission_pct IS NOT NULL
ORDER BY hire_date ASC
```

Results Explain Describe Saved SQL History

Organization Employee Details
The employee Janette King was hired on 30TH-JANUARY-1996 at a salary of 10000
The employee Patrick Sully was hired on 4TH-MARCH-1996 at a salary of 9500
The employee Ellen Abel was hired on 11TH-MAY-1996 at a salary of 11000
The employee Allan McEwen was hired on 1ST-AUGUST-1996 at a salary of 9000
The employee John Russell was hired on 1ST-OCTOBER-1996 at a salary of 14000
The employee Karen Partners was hired on 5TH-JANUARY-1997 at a salary of 13500
The employee David Lee was hired on 23RD-FEBRUARY-2000 at a salary of 6800
The employee Sundar Ande was hired on 24TH-MARCH-2000 at a salary of 6400
The employee Sundita Kumar was hired on 21ST-APRIL-2000 at a salary of 6100
The employee Amit Banda was hired on 21ST-APRIL-2000 at a salary of 6200

NOTE:

`SUBSTR(job_id, 1, 3)` extracts the first three characters.

`<>` means not equal to.

4. Write a query to fetch the details of all the employees based on the following conditions.

The employees should be assigned to the manager whose id is 100.

If the manager id is not 100 then the department id should be 60 and the salary should be greater than 4800.

Also all the employees should be employed between 1st Jan 1996 and 1st Jan 1999.

Order the result in an ascending order of department id.

Home > SQL > SQL Commands

Autocommit Display 100

```

Gietz	Tuesday, the Seventh of June, 1994	Monday, the Twelfth of December, 1994

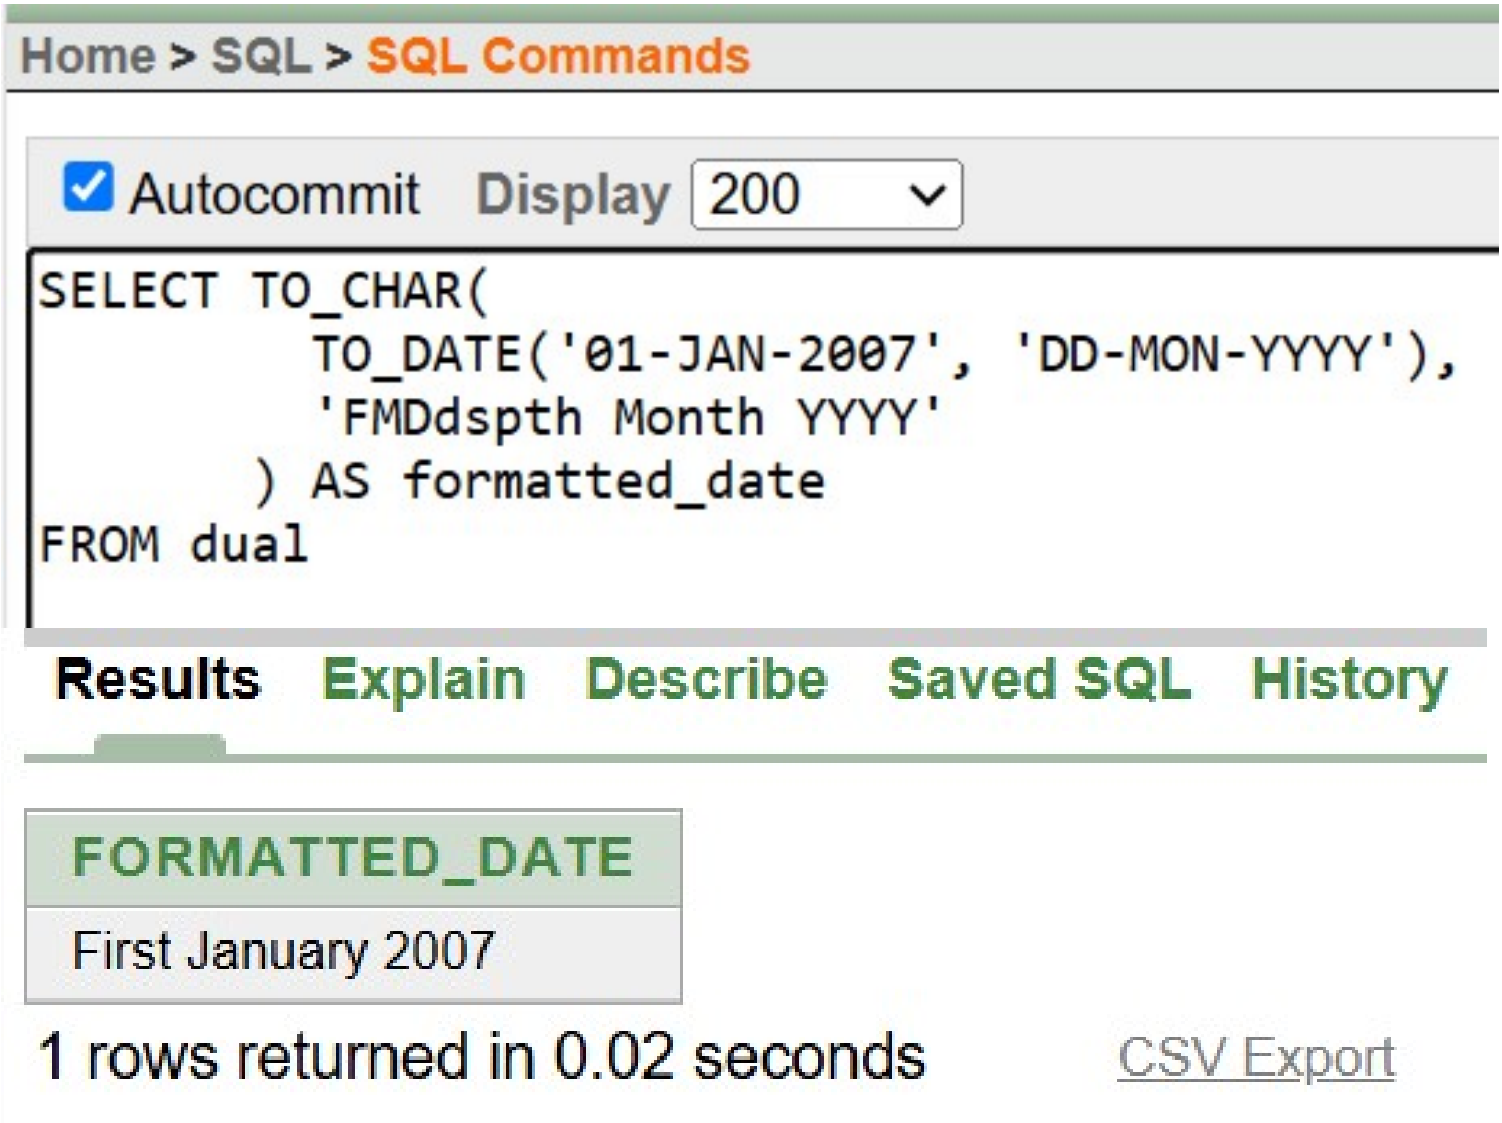

107 rows returned in 0.00 seconds CSV Export

NOTE:

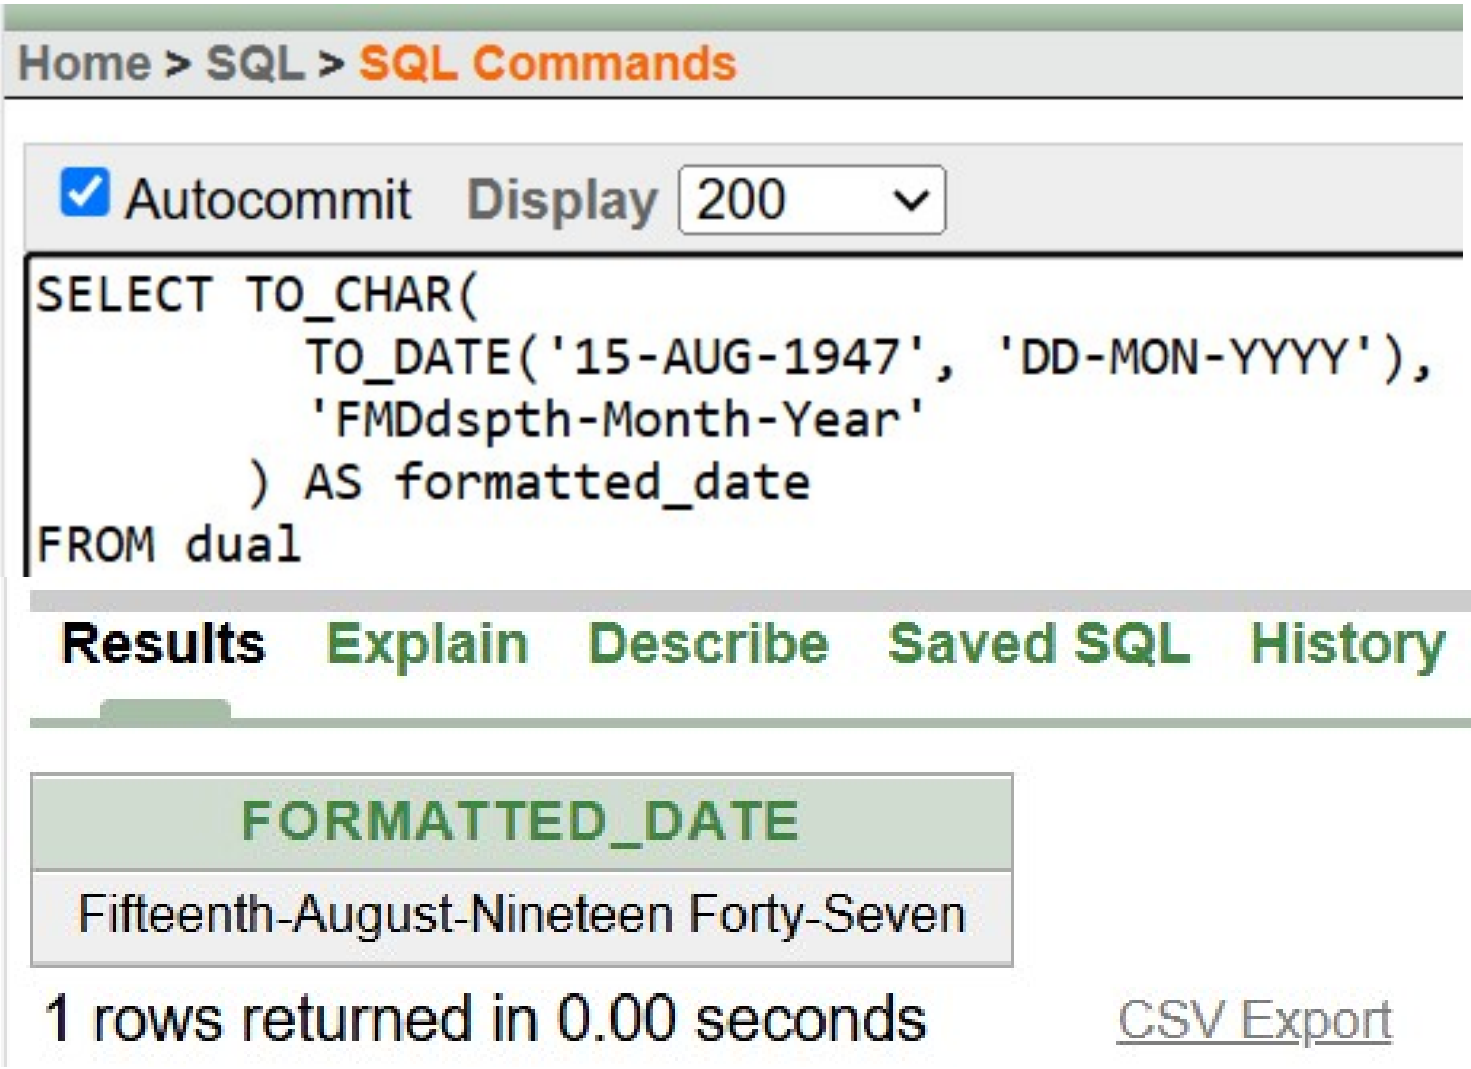

Function	Purpose
`ADD_MONTHS(hire_date, 6)`	Adds six months to the hire date.
`NEXT_DAY(date, 'MONDAY')`	Finds the first Monday after the given date.
`TO_CHAR()`	Converts the date into the required format.

The `Ddspth` format spells out the day as an ordinal number, while `Month` displays the month name.
Oracle's date format models support spelled-out ordinal days through SPTH, and NEXT_DAY returns the requested weekday after the given date.

8. Display the user input date ’01-jan-2007’ in the format ‘First January 2007’.

9. Display the user input date ’15-aug-1947’ in the format Fifteenth-August-Nineteen Forty-Seven.

10. From the employee table find the first name of all the employees who have worked in the organization for more than 800 weeks. Calculate the duration of their employment from today's date. Also report the number of weeks they have actually worked. Sort the result in the ascending order of weeks.

Home > SQL > SQL Commands

Autocommit Display 200

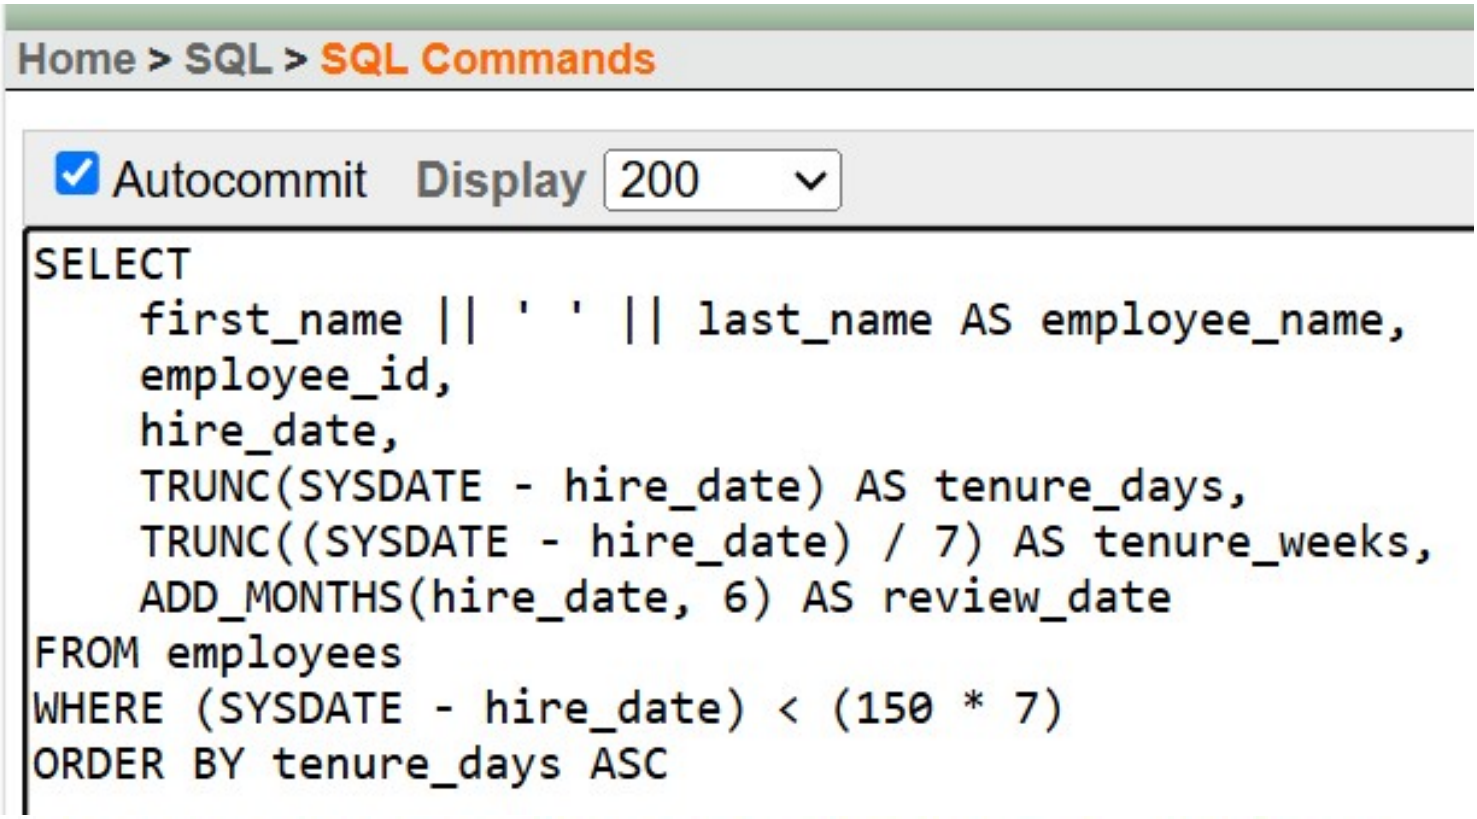

```
SELECT
    first_name,
    TRUNC(SYSDATE - hire_date) AS days_worked,
    TRUNC((SYSDATE - hire_date) / 7) AS weeks_worked
FROM employees
WHERE (SYSDATE - hire_date) > (800 * 7)
ORDER BY weeks_worked ASC
```

11. The manager of an organization wants to see when the salary review was done for some of its employees. The salary review was done after 6 months of the hire date. Find out the name , employment number, hire date, the total tenure and the review date of all the employees who have not completed 150 weeks in the company. Order the results in the ascending order of tenure.

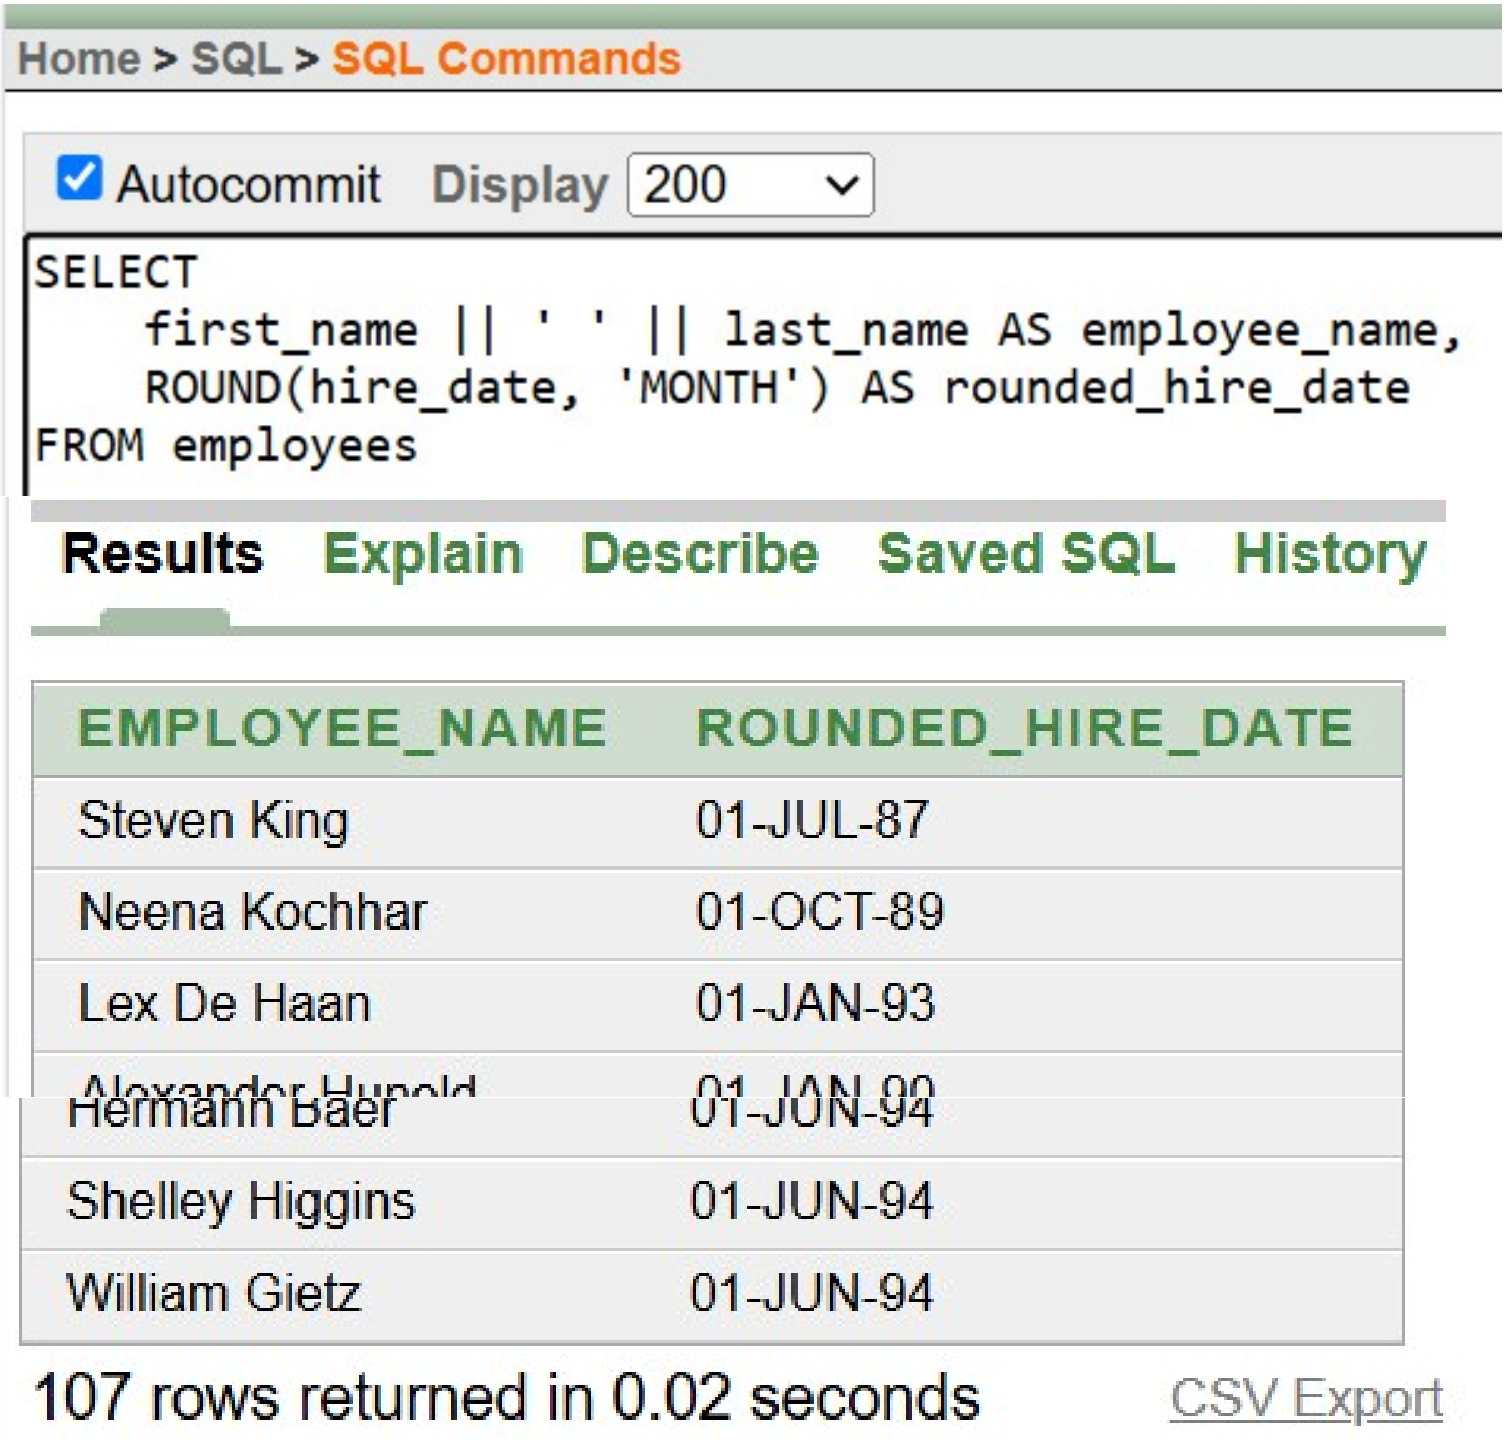

NOTE:

The query is correct, but it returns no records because the latest hire date in the HR sample database is 21-APR-2000. As of the current date, all employees have completed more than 150 weeks of service. Therefore, no employees satisfy the given condition. The query uses `SYSDATE` to calculate the actual tenure.

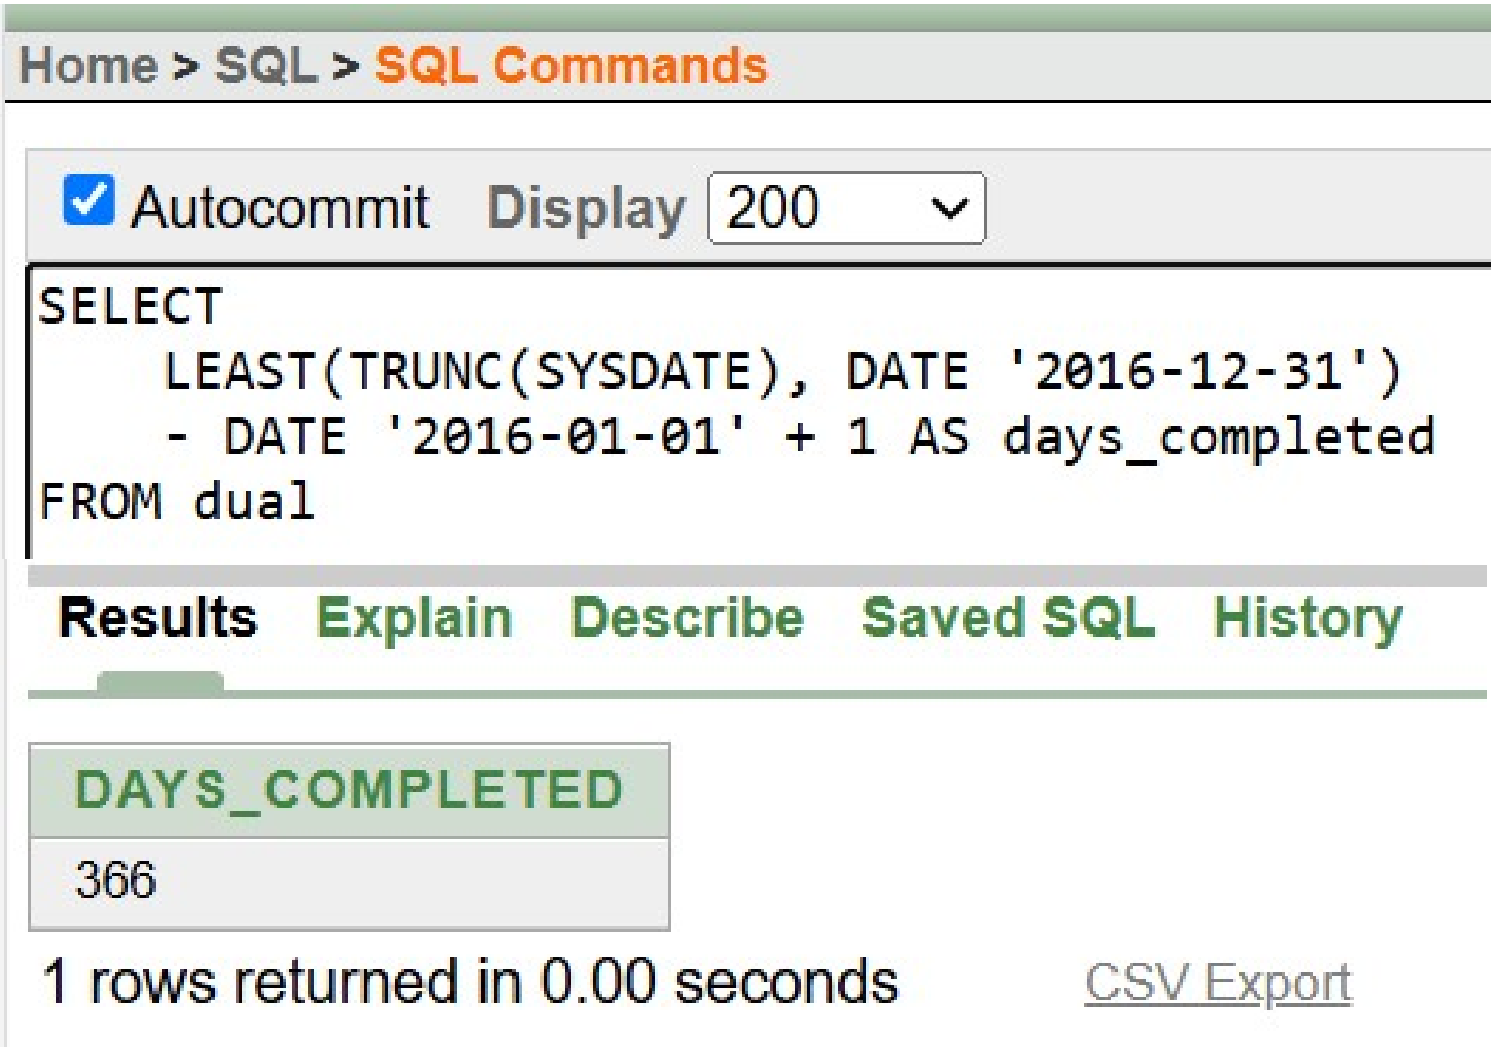

```sql
SELECT
    first_name || ' ' || last_name AS employee_name,
    employee_id,
    hire_date,
    TRUNC(DATE '2000-04-21' - hire_date) AS tenure_days,
    TRUNC((DATE '2000-04-21' - hire_date) / 7) AS tenure_weeks,
    ADD_MONTHS(hire_date, 6) AS review_date
FROM employees
WHERE (DATE '2000-04-21' - hire_date) < (150 * 7)
ORDER BY tenure_weeks ASC;
```

This modified query is only for practising with your old HR sample data.

12. Display the name and Round up the hire_date of all employees to nearest month.

13. Calculate the number of days completed up-to today in 2016.

14. If the employee joined in any day of a month then he have to get the salary in the 1st date of next month. So write a query to display the name, joining date, 1st month salary date , salary amount of each employee. Consider that in first month there will be no commission and the employee will paid for exact days he worked in the first month including Sunday & holidays.

Home > SQL > SQL Commands

Autocommit Display 200

```
SELECT
    first_name || ' ' || last_name AS employee_name,
    hire_date AS joining_date,
    ADD_MONTHS(TRUNC(hire_date, 'MM'), 1)
    AS first_salary_date,
    ROUND(salary * (TRUNC(LAST_DAY(hire_date)) - TRUNC(hire_date) + 1) /
        (TRUNC(LAST_DAY(hire_date)) - TRUNC(hire_date, 'MM') + 1), 2) AS first_month_salary
FROM employees
ORDER BY hire_date
```
